

Updating Farm Register using a combination of administrative data and survey data

Anders Grönvall, Budapest 2023-10-02

Farm Register i Sweden

Swedish Farm Register (FR) has been produced yearly since 1968

- It is a register over alla Swedish farms
- The thresholds for being included in FR has changes during time
- The threshold for FR is the same as the threshold for FSS/IFS.
 - For Sweden 2010-2023
 - at least 2 ha of arable land or 5 ha of agricultural land or
 - horticultural covering more than 2500 m² in open or 200 m² i greenhouse
 - at least 10 cattle or 10 sows or 50 pigs or 20 sheep and lambs or 1000 poultry
- Most agricultural statistics (structural) in Sweden is based on these thresholds

Farm Register i Sweden

Number of agricultural holdings in Sweden

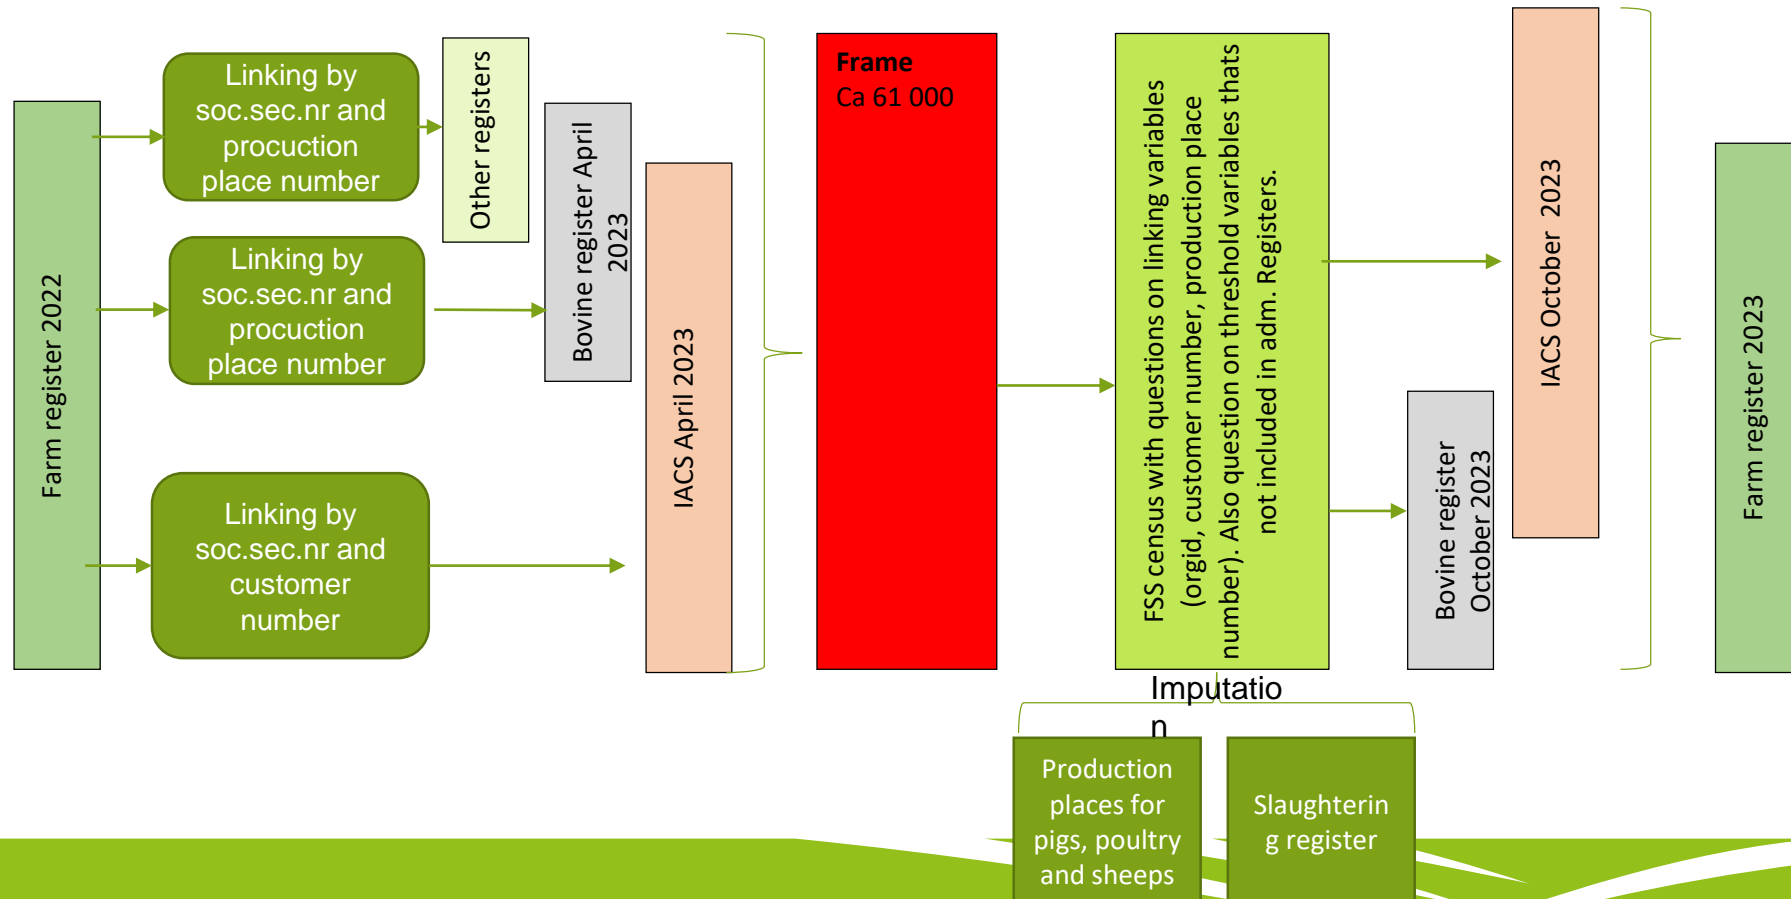

Farm Register i Sweden

- Historically the FR has been updated by yearly census on the agricultural holdings
 - Since 2000 the FR is updated by a combination of census-data, survey data and administrative data
 - Constantly developments of method
 - A FR with good quality is essential for
 - Monitoring development of farms
 - As a input for different surveys, for example to reduce sample size, better quality and less response burden. Also as a base for using administrative data for statistics and developments of inovative methods for statistics.
 - Statistics on low regional level
- In Sweden we do FSS/IFS as a census every time (....2016, 2020, 2023, 2026.....)

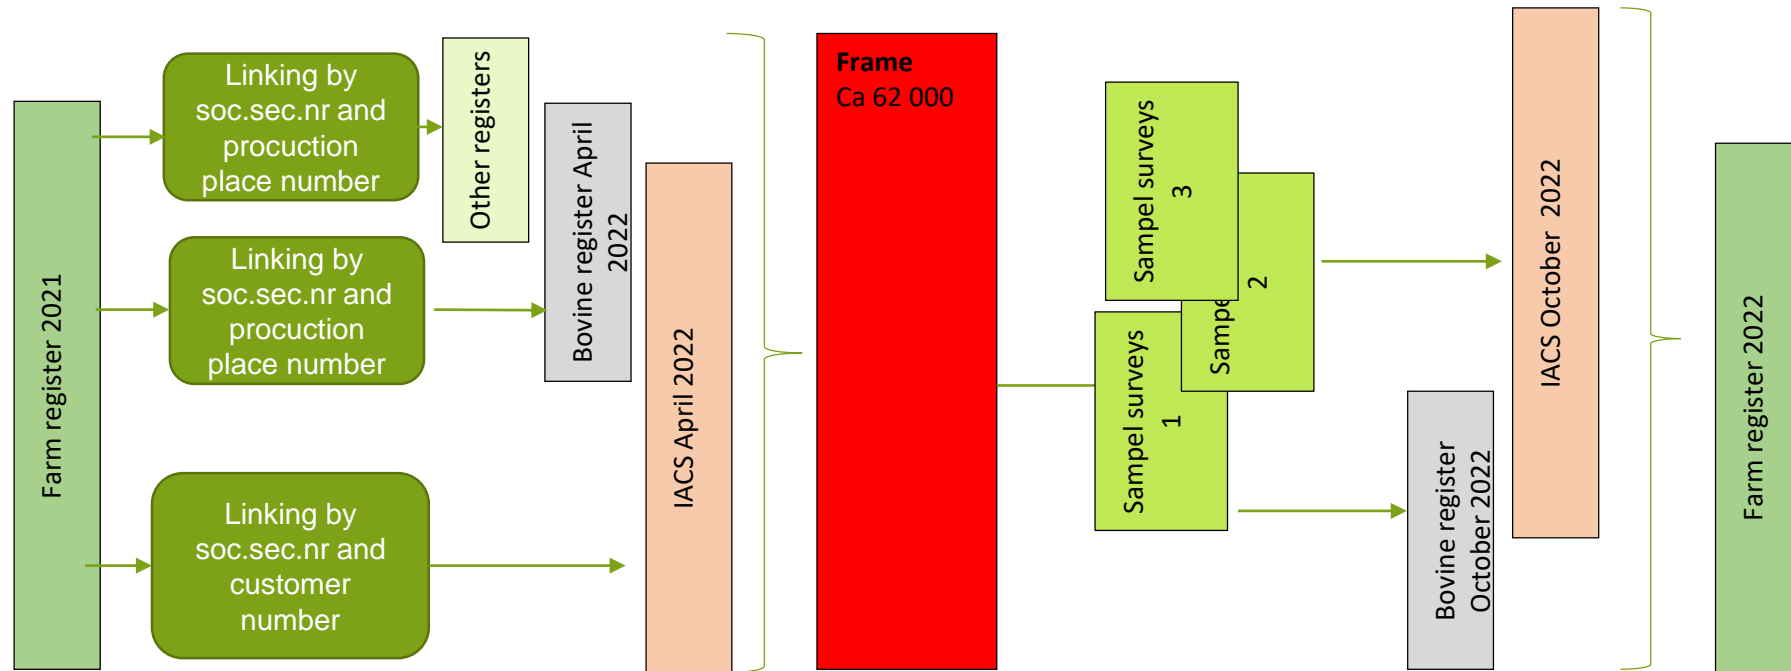

Farm Register i Sweden

Problems with using administrative data

- Linking
 - Farm register has not correct linking information
 - Farmers on several holdings
 - Mismatch between questionnaire and register
 - Registers are not updated

Farm Register i Sweden

Problems with linking – Example from IAKS

Farm Register i Sweden

Problems with linking – Example from IAKS

Solving linking problems

1. Use IFS to give as much information as possible on linking variables.
2. In case of one to many relation – create linking rules.
3. In case of "empty" links – create new holdings
4. In case of mismatches – create linking rules

Farm Register i Sweden

Constantly developments

The results from the black box of data-processing gives us:

1. Information on how to improve questionnaire
2. Information on how to improve communication with farmers
3. Improvements on linking data between different sources

Farm Register i Sweden

The result of doing a census every third year

- We have a very stable source for making samples for other surveys – The total response burden is less
- We can produce statistics from other administrative sources with good quality
- We can develop innovative methods/models with good quality.
- Every third year we can produce statistics on low regional level on basic variables
- It is used for evaluating proposals for policy-decisions. For example in situation of crises.
