TEÁOR'08

Name: Hungarian standard industrial classification of economic activities, 2008

Short name: TEÁOR'08

Legal basis (source):

- Regulation (EC) No. 1893/2006 of the European Parliament and of the Council of 20 December 2006 establishing the statistical classification of economic activities NACE Revision 2 and amending Council Regulation (EEC) No. 3037/90 as well as certain EC Regulations on specific statistical domains

Implementation date (validity): 1 January 2008

History of the classification:
The predecessor of the classification was TEÁOR'03, which entered into force on 1 January 2003.
The two activity classifications were in force simultaneously up to 2011. The reason for this was that statistical data in the areas of national accounts and the related statistical domains had to be transmitted to Eurostat according to TEÁOR'03 in accordance with the requirements of the European Union.
From 2012, however, HCSO publishes the data for all the statistical domains concerned according to TEÁOR'08 only.

Structure:

Level 1: 21 sections; alphabetical codes: A to U;
Level 2: 88 divisions; two-digit codes: 01 to 99;
Level 3: 272 groups; three-digit codes: 01.1 to 99.0;
Level 4: 615 classes; four-digit codes: 01.11 to 99.00.

Short description of content:
It classifies economic activities, taking into consideration the following characteristics of activities:

- the characteristics of products produced and services provided,
- the purpose of use and the function of goods and services,
- the inputs used, the process of production and the technology.

It is units performing economic activities, i.e. business units that are classified – according to their principal activity – into four-digit classes of TEÁOR.

Applications:
Business statistics in general (registers, national accounts, short-term indicators, annual performance statistics, labour market indicators and energy, transport and environment statistics).

TEÁOR is widely applied in public administration as well. Thus, in different registers, such as the company register, the taxpayer register and courts' register. Furthermore, several pieces of legislation, too, use TEÁOR codes to identify activities.

Relation to international classifications:

It corresponds to NACE Rev.2, the EU's activity classification, and – at levels 1–2 – to ISIC Rev.4, the UN activity classification.
