

The HCSO performed an extraordinary revision in the 2023–2025 national economy's investment data

1. Investment price index (2023–2025)

The investment price index is a seconder type index. The calculation of the sections' quarterly investment price index is based on the investment price indices corresponding to the investment structure, external trade import and industrial domestic sales according to commodity groups, construction ones based on construction sub-groups, as well as agricultural investment ones, with weights characterising the distribution of section's investments in the second year preceding the reference year, in material-technical composition (construction, domestic machinery, domestic transport equipment, imported machinery, imported transport equipment, plantations, animal stock, major improvements to land) breakdown.

Due to the 2025 complex methodological renewal of the external trade in goods statistics the retroactive revision of the investment price indices of the import machinery and transport equipment became necessary, as these are based on it.

The commodity group-data produced with the new methodology significantly transform the investment prices between the 4th quarter of 2023 and the 3rd one of 2024, the difference between the data of the two methods are due to the different approach regarding outliers and the commodity groups' coverage.

2. Investment performance value (2024)

Due to major data corrections coming from data suppliers the revision of the 2024 base year preliminary investment performance value has been revised as well, in connection with the price revision. Corrected, re-processed, yearly reports, yearly data reporting related data are still preliminary, final data for the 2024 base year are going to be published at the end of February 2026.

Performance value of the national economy's investments, quarters of 2024 [at current prices, million HUF]					
	1st	2nd	3rd	4th	Q 1-4
Revised	2 751 448	3 397 761	3 579 537	5 394 498	15 123 243
Previously published	2 931 140	3 444 538	3 647 548	5 397 765	15 420 991

Change in the volume indices of the national economy's investments due to the joint impact of the two factors:
