

INTERNET SERVICES, 1ST QUARTER 2026

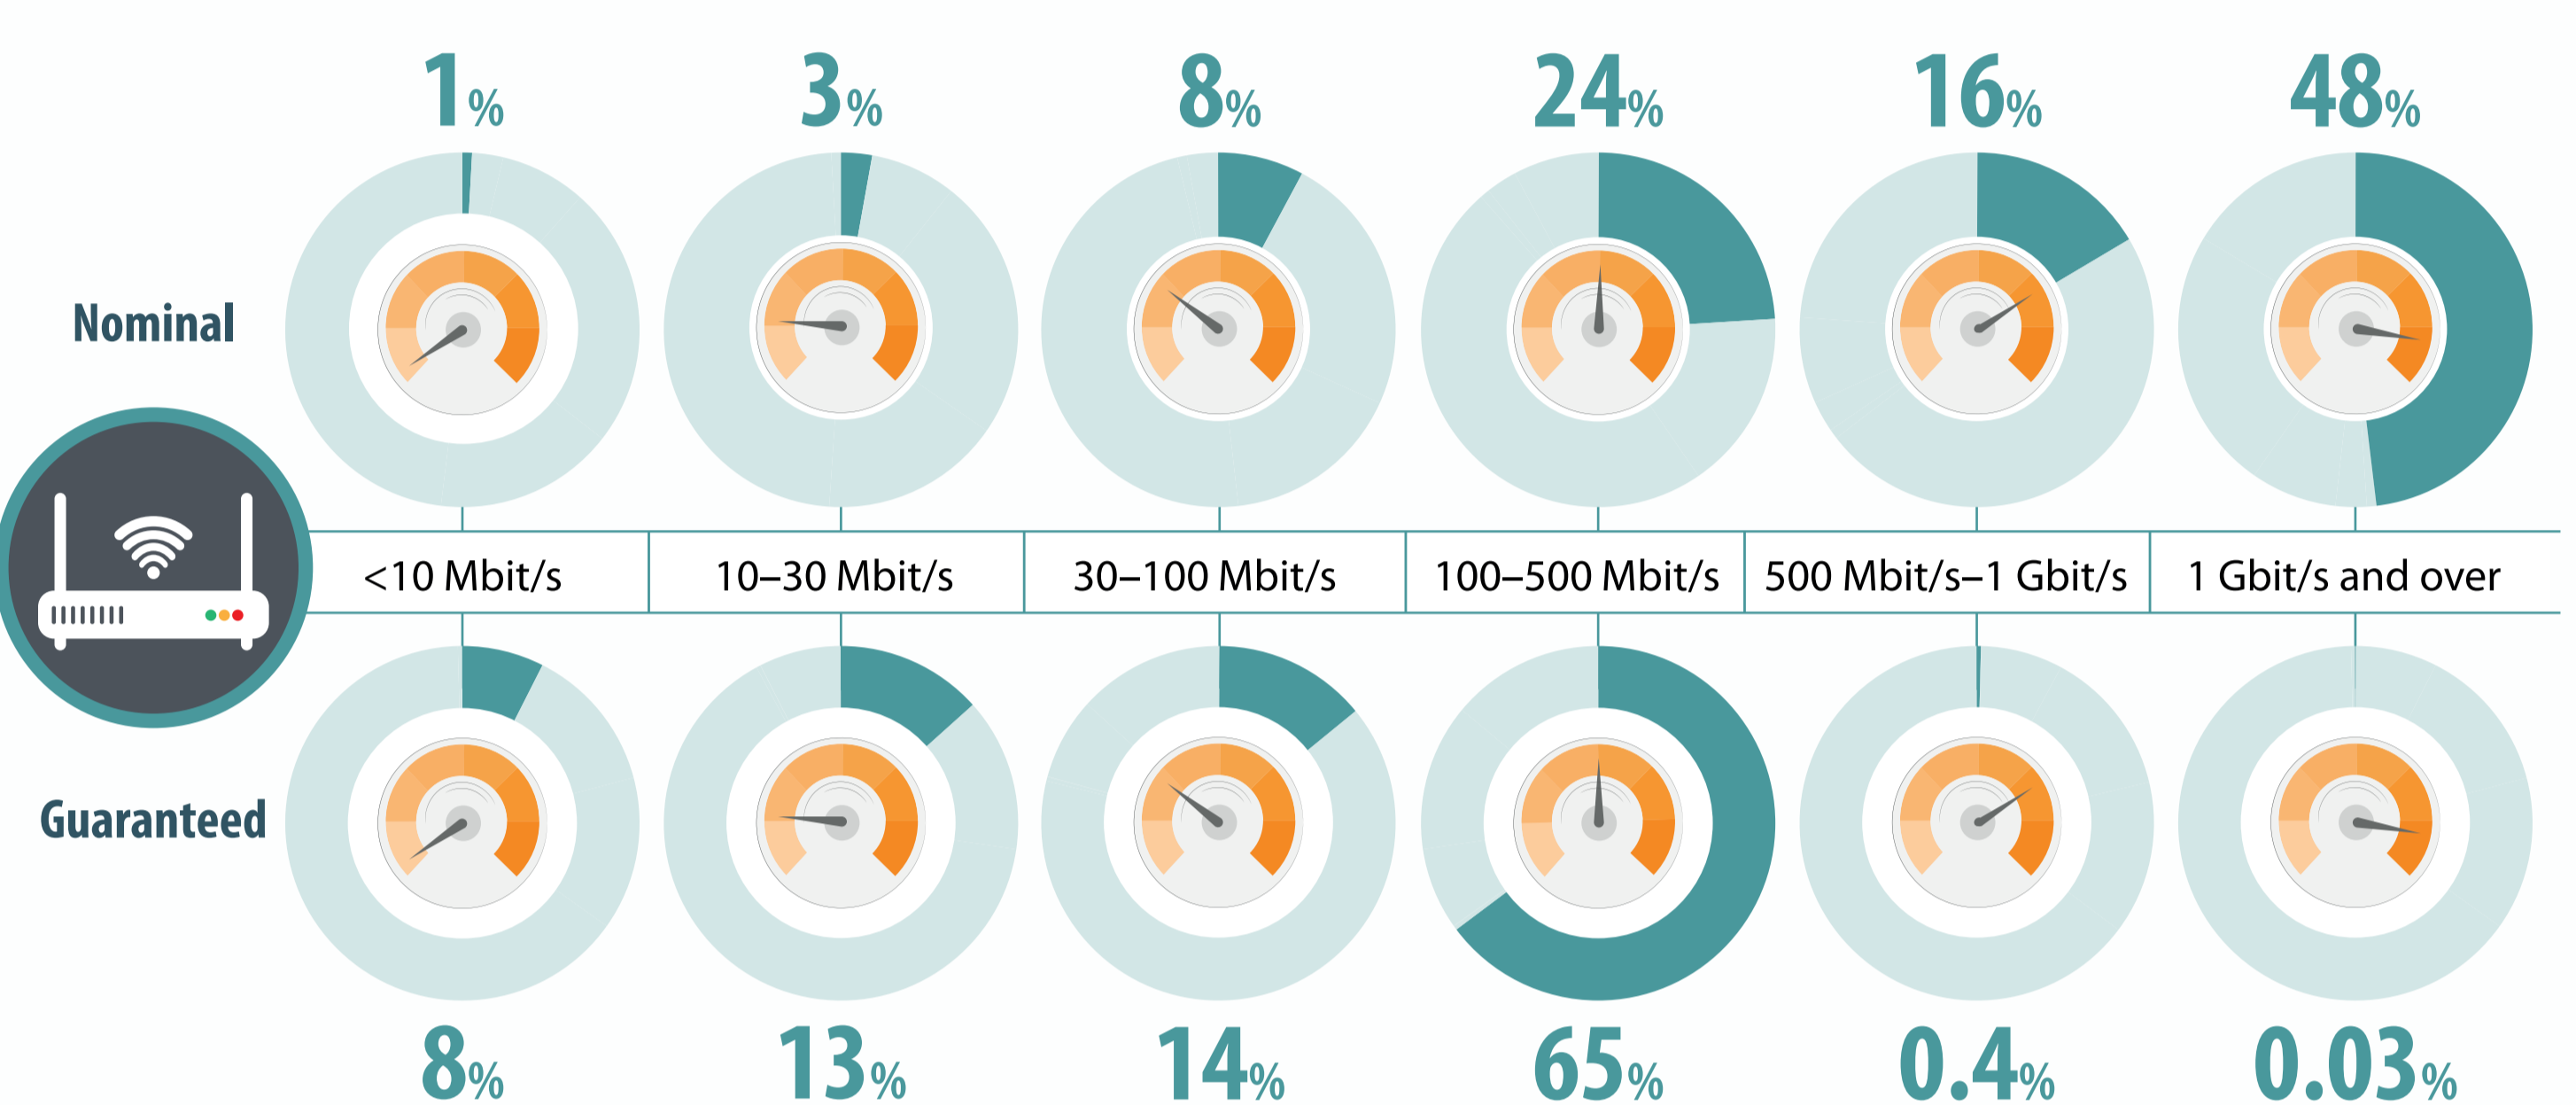

The number of fixed-line internet subscriptions in the first quarter of 2026 exceeded the level of a year earlier by 0.7%, driven by a 6.1% increase in the optical segment.

Change in the optical segment within fixed-line internet subscriptions, thousand

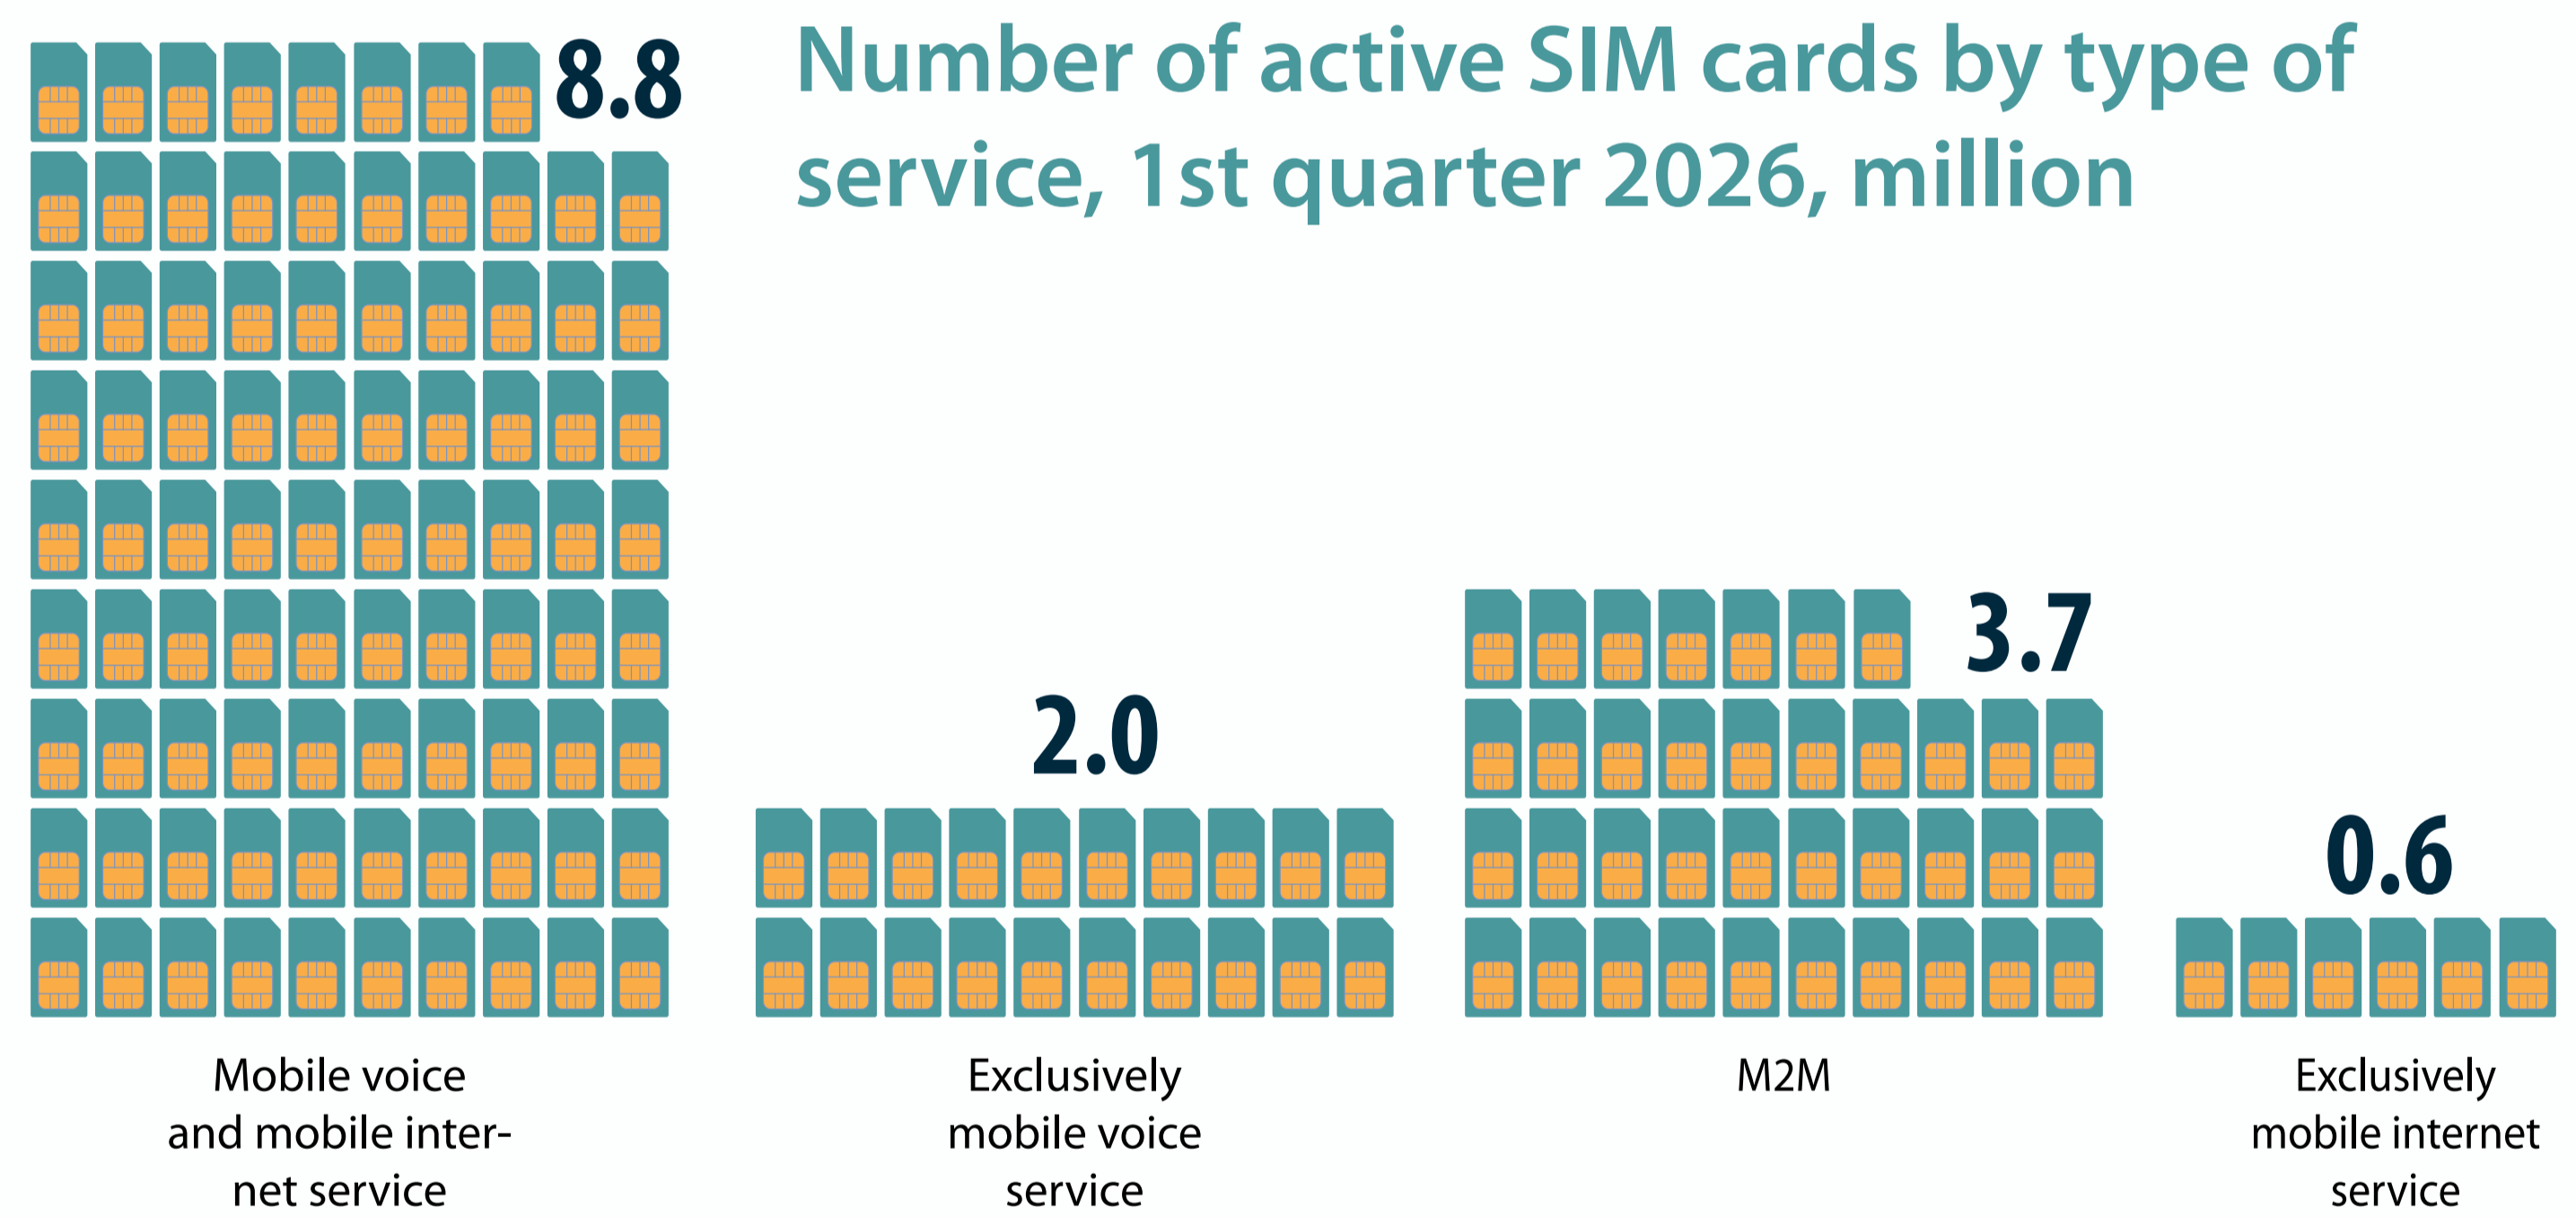

An increasing share of users prefer packages that provide high-speed internet access (at least 500 Mbit/s).

Distribution of fixed-line internet subscriptions by guaranteed and nominal bandwidth, 1st quarter 2026

The number of SIM cards required for mobile internet access increased by 3.8% over the year, primarily due to the growing use of M2M cards in machine-to-machine communication.

Mobile data traffic expanded by one-fifth over the year. On average, a mobile subscription providing internet access generated 41 GB of data traffic in the first quarter of 2026. Download traffic via fixed-line internet connections increased by 12% compared with the same period of the previous year.
